ACOUSTIC SOLUTIONS

Classroom Acoustics

It's hard for students to learn in noisy classrooms. However, there are ways to reduce noise and improve classroom acoustics

About Classroom Acoustics

Hearing and understanding are important parts of the learning process. A noisy classroom can make these tasks difficult. Noise in the classroom is more than students talking. There are other factors that make it hard to hear and understand in the classroom. Acoustics is a term used to talk about how sound travels in a room. There are factors in the room design that may make sounds louder or softer. Classroom acoustics is the term for these issues in schools.

Good Classroom Acoustics Helps Everyone

A quiet classroom helps teachers and students. The key to lowering noise levels in any busy area is reducing the sound that reflects off walls and other objects, also known as echo or reverberation. Installing sound-absorbing material can have a huge impact on reducing the overall decibel count of your classroom, but with obstacles like glass windows, wall-length desks, whiteboards and cupboards in the way, it can be hard to figure out a solution.

Acoustics Solutions

The ZIP Acoustic Room Dividers the Accoustic Pinnable Peel N Stick Tiles are two great 'ready to go' products that are available. However, if you are after a more customised solution for your school, [please give us a call to discuss your requirements.](#)
